

Prenatal Care

Affinity Health Plan has a responsibility to ensure that all our prenatal Members receive appropriate, timely and comprehensive care during their pregnancy.

The Prenatal and Postpartum Care QARR measure assesses the following facets of care:

- **Timeliness of Prenatal Care:** Members should receive a prenatal visit within the first trimester if they are enrolled in Affinity throughout their pregnancy. If Members enroll during their pregnancy, they must have the first visit within 42 days of enrollment.

Schedule this visit as soon after a positive pregnancy test. If prenatal labs are ordered at the initial encounter when pregnancy is established, have an OB provider sign off and become the provider of service for that visit. This visit will then count as a prenatal visit.

- **Frequency of Prenatal Care:** Prenatal Members are expected to receive greater than or equal to 81% of the expected number of prenatal care visits. The expected number of prenatal visits for Members enrolled throughout the pregnancy is 14.
- **Postpartum Care:** Members should have a postpartum visit 21 – 56 days after delivery.

CPT codes:

99201-99205; 99211-99215; 99241-99245; 99271-99275.

All these codes **must be submitted with ICD9 codes of V22, V23**

Or

59400; 59510; 59610; 59618; 59425; 59426

During our chart reviews, we are also looking for documentation of:

- Last menstrual period
- 1st sonogram
- Estimated date of delivery
- Date of 1st prenatal visit
- Date of post partum visit
- Two HIV tests

- A GBS test at 35-37 weeks
- An Hct or Hgb at 28-40 weeks
- A GC/chlamydia test at 32-40 weeks
